

Ops Console — Features to Build

The features the ops console needs so the Bombino team can manage and configure riders, pickup areas, guests, KYC and app settings themselves. Written for Arbaaz on 10 Sep 2026.

Tags:

- **Must** — needed for day-to-day operation.
- **Should** — needed, but staff can manage without it for a while.
- **Nice** — polish.

Words used in this list

Word	What it means
Rider	The pickup boy. Called an "agent" in the code.
Round (beat)	A rider's area: a set of pincodes, the latest same-day booking time, and the riders who cover it.
Cut-off	The latest time a customer can book and still get a same-day pickup.
Drop-off counter	One of Bombino's offices where a customer can hand in a parcel themselves.
Guest	A customer who booked without making an account. They proved their phone with an OTP and uploaded their ID.
KYC / ID	The customer's identity documents (Aadhaar, PAN, GST). Customs needs them.
Hub	ITD's office code, such as "Mumbai" or "Fort Office". It comes from ITD.

1. Riders

- [] R1 · Edit a rider's details — *Must*
 - Change a rider's name, phone number and email.
- [] R2 · Switch a rider on or off — *Must*
 - An inactive rider can't log in and gets no job alerts. Their past jobs and cash records are kept.
- [] R3 · Choose a rider's pickup areas from their profile — *Must*
 - When creating or editing a rider, tick the rounds they cover. This decides which new jobs they're alerted about.
- [] R4 · Rider profile page — *Should*
 - One page per rider showing:
 - their details
 - their rounds and cut-off times

- the jobs they're on right now
 - the cash they've collected today
- [] **R5 · Riders waiting for a phone number** — *Should*
 - Add a rider with just a name and round, marked "waiting for number". Adding the number later turns them into a working rider.
- [] **R6 · Clear label on the "Hub" field** — *Nice*
 - Rename it "ITD hub", with a hint that it doesn't set the rider's area.

2. Serviceable pincodes and cities

- [] **C1 · Pincode lookup** — *Must*
 - Type any pincode and see:
 - whether Bombino picks up from it
 - the city and area name the customer sees
 - the round or rounds it belongs to
 - the cut-off time
 - which riders get the alert
 - whether an out-of-city charge applies
 - and, if it isn't covered, the nearest drop-off counter
- [] **C2 · Edit each pincode's details** — *Must*
 - Show a round's pincodes as a table where each row's **city**, **area name** and **out-of-city charge** can be edited.
- [] **C3 · "No rider" warning** — *Should*
 - A dashboard alert listing the pincodes whose round has no working rider, linked to where it can be fixed.
- [] **C4 · Who gets alerted when a round has no rider** — *Nice*
 - A setting with three choices: every rider, only riders in the same city, or only the office.
- [] **C5 · Upload pincodes from a spreadsheet** — *Nice*
 - Upload a CSV (pincode, city, area) into a round instead of pasting.
- [] **C6 · "Live within 5 minutes" note** — *Nice*
 - After saving coverage changes, tell staff how soon customers will see them.

3. Drop-off counters

- [] **D1 · Manage the counters list** — *Must*
 - Add, edit and hide counters: name, address, pincode, state, and other names the city goes by. This is the list customers see on the booking page and the Locations page.
- [] **D2 · Suggested counter on drop-off orders** — *Should*

- Show which counter each drop-off customer was sent to, and let each counter filter to its own parcels.

4. Guests

- [] **G1 · Guest details on orders** — *Must*
 - Show the guest's name, phone and email on the board, the order page and the export, with a "Guest" label.
- [] **G2 · Guests section, separate from account holders** — *Must*
 - A **Guests** tab next to Customers, searchable by phone and name. Each guest page shows:
 - their details
 - their personal or company information (GST, company name, address)
 - all their orders
- [] **G3 · View a guest's ID documents** — *Must*
 - A document viewer on the guest page. Super-admin only, and every view logged.
- [] **G4 · Search orders by the sender's phone or name** — *Must*
 - Works for both guests and account holders.
- [] **G5 · Filter orders by guest or account holder** — *Should*
 - A "Guest / Account" filter on the order board.
- [] **G6 · Edit a guest's contact details** — *Should*
 - Fix a guest's name and email when the guest asks.
- [] **G7 · Guest account-setup progress** — *Should*
 - Show what a guest has filled in, and what's missing, while turning their guest profile into an account.
- [] **G8 · "Started as a guest" note** — *Nice*
 - On accounts, and orders, that began as guest bookings.
- [] **G9 · Block a phone number from guest booking** — *Nice*
 - A staff-managed list of numbers that can't book as a guest.

5. KYC

How KYC works:

- ID checks are done **only by Cashfree Smart OCR**. Staff never check or approve a document.
- **Until the live Cashfree details are shared**, the check is skipped silently and every document counts as verified. Nothing on screen says it was skipped.
- **Once Cashfree is live**, a customer whose document fails sees a popup explaining why. The ops console shows the same reason.
- **A failed or skipped check never stops an order or the AWB.**

- [] K1 · Show Cashfree's result and reason on each document — *Should (once Cashfree is live)*
 - Next to each document on the customer or guest page, show "**Verified**", or "**Could not be verified**" with the reason Cashfree gave. This matches the popup the customer sees.
- [] K2 · List of customers whose KYC failed — *Should (once Cashfree is live)*
 - One list of customers and guests whose document Cashfree couldn't verify, with the reason, so the team can follow up. It's for information only — nothing is blocked.

6. Settings (super-admin only)

- [] S1 · Support contact numbers — *Must*
 - One place to set the office phone and support WhatsApp number shown across the customer app and the rider app.
- [] S2 · On/off switches — *Must*
 - Each switch shows its state, a plain explanation, and who last changed it and when:

Switch	What it controls
Guest booking	Whether people can book without an account
Cashfree ID check	Test (the check is skipped silently while Bombino has test credentials) or Live (Cashfree checks every document). Either way, orders and AWBs never stop.
Labels at booking	Whether the ITD label is made as soon as an ITD-linked customer books
Payments test mode	Whether orders go through without a real payment. Must be off in real use.

- [] S3 · Default pickup cut-off — *Should*
 - The same-day booking time used wherever a round has no time of its own.
- [] S4 · Change history — *Should*
 - One list of who changed what, and when, across riders, rounds, pincodes, counters, settings and KYC decisions.
- [] S5 · Signup data retention — *Nice*
 - The number of days before unfinished signups, and guest profiles with no orders, are deleted.
- [] S6 · Hub list — *Nice*
 - ITD's hub list, shown read-only for reference.

Build order

Phase 1

- G1 · Guest details on orders

- G4 · Search by the sender
- R1 · Edit a rider's details
- R2 · Switch a rider on or off
- R3 · Choose a rider's areas from their profile
- S1 · Support contact numbers

Phase 2

- G2 · Guests section
- G3 · Guest ID documents
- C1 · Pincode lookup
- C2 · Edit each pincode's details
- D1 · Manage the counters list
- S2 · On/off switches
- S4 · Change history

Phase 3: everything else.

Section	Must	Should	Nice
Riders	R1, R2, R3	R4, R5	R6
Pincodes and cities	C1, C2	C3	C4, C5, C6
Drop-off counters	D1	D2	—
Guests	G1, G2, G3, G4	G5, G6, G7	G8, G9
KYC	—	K1, K2	—
Settings	S1, S2	S3, S4	S5, S6
